## Characteristics and typical fields of application

Stainless; heat resistant; high temperature resistant. Cold toughness at subzero temperatures as low as -269 °C (-452 °F). Well suited for welding austenitic ferritic joints. No Cr carbide zones that become brittle in the ferrite weld deposit transition zone, even not as a result of heat treatments above 300 °C (572 °F). Well suited for tough joints and surfacing on heat resistant Cr and CrNi steels/cast steel grades and Ni-base alloys.

Temperature limits: 500 °C (932 °F) in sulphureous atmospheres, 800 °C max (1472 °F) for fully stressed welds. Resistant to scaling up to 1000 °C (1832 °F).
