

Due to the expansion of the front plier, the tube is mechanically expanded for a few mm, approached to the tubesheet holes and fixed in the required position before the welding operation.

Kattex Fix

Hydraulically operated tube locking system for pre-welding expansion on the heat exchangers

Innovative patented system for the instantaneous locking of tubes using a metal expanding plier. The use of the **Kattex Fix** ensures a precise result in a very limited time increasing the job productivity.

TP2-EQ2

Suggested semi-automatic hydraulic unit with electrical motor and equipped with a timer control system for repetitive jobs.
